February 17, 2015

MUNICIPALITY OF KINCARDINE RESIDENTS ARE ASKED TO RUN TAPS TO AVOID FROZEN PIPES

Due to the current depth of frost and continuing cold temperatures, residents are urged to let a tap in their house run (about 1/8 inch stream - approximately the width of a pencil lead). The cost of doing so is expected to be not overly significant (less than a dollar per day) for a home. The municipal expenses incurred to thaw a line forms a cost to all water system users.

Residents should be aware that reduced water pressure in their home could be an indication of water lines freezing. If you notice this, run a tap full strength and call the Water Department.

With a quick internet search, you will find a number of tips that may assist with helping to avoid freezing pipes within your home. The water service from the property line (curbstop) to and inside the house/building is the responsibility of the property owner.

Why do water lines freeze?

The frost depth (depth to which ground is frozen) does not normally reach the level of municipal buried infrastructure. However, with extremely cold temperatures, like those we have experienced this winter, frost can push to a depth that will freeze water services. As the water is already cold when it enters the water distribution system, it takes very little exposure to colder temperatures for it to freeze.

How do municipal staff thaw the lines?

Staff use two types of thawing equipment (hot water and electricity) to safely thaw services. Some of the services require digging at the curb stop and the water main to successfully thaw them. If digging is required, then snow has to be cleared and locates secured.

Who do I contact?

If you suspect your service may be freezing or has frozen, call the Water Department at 519.396.4660, after hours call the emergency line at 519.396.1511.
